As mentioned in prior posts, I have paralleled my Onan with the utility, using utility as a load bank. I used 600 volt fast acting fuses and 600 volt switchgear, as that is the minimum necessary. I used a light bulb to synchronize because that is what I had. I had an ammeter, voltmeter, frequency meter, a sharp eye and ears, and experience.

Assumed it was built into the compressor coil during a R12-> R134a conversion. It was actually located 12" back in the harness buried in the plastic loom. The conversion calls for the addition of a high pressure cut-out switch in the compressor as R134a has a higher head pressures. (The OEM R12 system did not have a high pressure cut-out.)
