Asp Net Web Api 2
ASP.NET Web API is a framework for building web APIs on top of the .NET Framework. Software versions used in the tutorial. Visual Studio 2017; Web API 2; See Create a web API with ASP.NET Core and Visual Studio for Windows for a newer version of this tutorial. Create a Web API Project

Get Started with ASP.NET Web API 2 (C#) - ASP.NET 4.x ...
REST APIs with .NET and C#. ASP.NET makes it easy to build services that reach a broad range of clients, including browsers and mobile devices. With ASP.NET you use the same framework and patterns to build both web pages and services, side-by-side in the same project.

ASP.NET Web APIs | Rest APIs with .NET and C#
The first release of Web API used convention-based routing. In that type of routing, you define one or more route templates, which are basically parameterized strings. When the framework receives a request, it matches the URI against the route template. For more information about convention-based routing, see Routing in ASP.NET Web API.

Attribute Routing in ASP.NET Web API 2 | Microsoft Docs
An excerpt from asp.net about routing, "Routing is how Web API matches a URI to an action. Web API 2 supports a new type of routing, called attribute routing. As the name implies, attribute routing uses attributes to define routes. Attribute routing gives you more control over the URIs in your web API.

Attribute Routing in ASP.NET Web API 2
IHttpActionResult – new way of creating responses in ASP.NET Web API 2 In the first version of Web API, you had two ways of creating response from an API action. Either return a specific object instance (or void) and let the Web API pipeline convert that to an HttpResponseMessage for you, or return a raw HttpResponseMessage .

IHttpActionResult - StrathWeb. A free flowing web tech ...
In this post, we will learn about OData by using ASP.Net Web API 2 in MVC application. What's OData protocol? The Open Data Protocol (OData) is a data access protocol for the web. OData provides a uniform way to query and manipulate data sets through CRUD operations (create, read, update, and delete).
