Circuit Design of Low Power Audio Amplifier: Here the circuit designing is a simple process involving just two steps – designing the preamplifier section and designing the astable multivibrator section.. Here we are using a low noise JFET input operational amplifier TL071 with low input bias current and high slew rate of about $13\text{V}/\mu\text{s}$. A voltage divider

music or voice, we recommend that the amplifier power be 1.6 times the Continuous Power rating per channel. If you are doing heavy metal/grunge, try 2.5 times the Continuous Power rating per channel. The amplifier power must be rated for the impedance of the loudspeaker (2, 4, 8 or 16 ohms). Here's an example.
