The Boeing 747 is a large, long-range wide-body airliner designed and manufactured by Boeing Commercial Airplanes in the United States. After introducing the 707 in October 1958, Pan Am wanted a jet 2 + 1/2 times its size, to reduce its seat cost by 30% to democratize air travel. In 1965, Joe Sutter left the 737 development program to design the 747, the first twin aisle airliner.

Thus I believe that some aircraft system is engaged either by the pilot or an online computer at that point in the ascent. The process is to change the cabin pressure from "X" to "Y". If I understand the position correctly, then the flaps at the tail end of the aircraft are opened/closed to a particular angle to set the appropriate ...

Aircraft Pressurization Beginner's Guide - AeroSavvy

Yes, indeed, the TU-144 pilot executed a violent manoeuvre to avoid a Mirage which was shadowing the TU-144 in the broken cloud cover. That manoeuvre caused the -144's engines to flame out. The pilot pointed the nose towards the ground to get the airspeed needed to restart the engines in the air.
