ENABLING IOT IS WHAT WE DO

IoT or Internet of Things is a set of digitized physical objects that, thanks to different levels of processing, monitoring, analysis and Artificial Intelligence, communicate and interact with each other and with their external environment, even without men's intervention (as in the case of drones, driverless cars and collaborative robots).We too, by transmitting data from our devices, are ...

Internet of Things (IoT) - Enabling Technologies - Engineering

Why Is IoT so Important? Over the past few years, IoT has become one of the most important technologies of the 21st century. Now that we can connect everyday objects—kitchen appliances, cars, thermostats, baby monitors—to the internet via embedded devices, seamless communication is possible between people, processes, and things.
