These engines have all kinds of protective devices to prevent you from burning it up or blowing it. Check you temperature, oil pressure, RPM's and water pressure. You should get an alarm prior to any of these problems shutting the engine off. If it is a fuel problem, try hooking up a portable outboard engine fuel tank to the engine and running it.

1) Engine will quickly turn off and on at idle, at speed, during initial acceleration, and under load at wakeboard speeds (with and without ballast). I haven't seen the problem at wakesurf speeds (9.5-10) with full ballast, but I've probably just been lucky. 2) It doesn't sputter. It doesn't slow down and stall like it's starving for fuel.

3.) choke. bingo, this was my issue. The electric choke was all whaked out of adjustment & sticky.

## Online Library Mercruiser 140 Engine Stalls Under Load

Once I got this dialed in, putting in gear didn't cause a stall. Even though it seemed like I was idling fine and revved fine, it wasn't, and the resistance caused by engaging in gear / tranny / prop caused it to instantly stall.

### **Starts, idles...stalls when in gear - Maintenance, Tech ...**

Hi. I have a 2005 mercruiser 4.3 efi. It cuts out randomly but then either goes to idle or if it stalls, it restarts immediately every time. It can run for days or weeks with no problems but will then do this every few minutes.
