Microbiology can appear daunting when you don't know what to focus on. Fortunately, microbiology questions tested on the ASCP exam focus on diagnosis. In a real laboratory, the organism would arrive in some media. You would ask yourself, "I wonder what this organism is?" You would then culture and gram stain, or perform some other tests to figure out what you're dealing with.

The complement fixation test (CFT) does not depend on the hem-agglutinating activity of the virus, but the antibodies must fix the complement, and the sera must be free of anticomplementary activity. The test has been superseded, in many instances, by newer tests, such as enzyme immunoassay (EIA).. The terminal components of the complement cascade, C789 (the membrane attack complex), can ...
