Fig. 27.2 shows a Bland-Altman plot of the 104 clinic versus laboratory data on warfarin INR values in DB13. Three of the anomalies identified in the Fig. 27.1 plots can be seen. The mean is offset, lying above zero, suggesting a mean bias. The data cluster more greatly in the upper left and the cluster moves downward as we pass from left to right, suggesting that the mean bias is greater for ...

With antiplatelet therapy alone, this risk is 2.2% per 100 patient-years, and with warfarin therapy it is reduced to 1% per 100 patient-years. 14 Risk is variable, dependent on the valve type and position: a prosthesis valve in the mitral position increases the embolic risk almost twice as compared with valves in the aortic position.

Anticoagulation and Antiplatelet Therapy in Urologic ...

the volume of the reaction container (between 500 and 700 ml), and; the pH of the solution (between 2.5 and 5). We change the experimental factors and measure the response outcome, which in this case, is the yield of the desired product. Using the COST approach, we can vary just one of the factors at time to see what affect it has on the yield.
